Risk and Reward Profile

This risk indicator is calculated using historical data, which cannot be used as a prediction for the future risk profile of the Sub-Fund. Therefore, the risk and reward category shown is not guaranteed to remain unchanged and the categorisation of the Sub-Fund may shift over time.

Even if the Sub-Fund is in the lowest risk class you can lose money, as no investments are entirely risk free.

At this time, the level of the risk and reward profile is equal to 4, due to the medium volatility of the markets and instruments in which the Sub-Fund invests.

The risk and reward profile does not take into consideration the following risks, which can affect the Fund:

- credit risk: which are linked to the debt securities the Sub-Fund invests in;
- operational risk: which may occur due to technical issues for example natural disasters, misunderstandings and fraud;
- counterparty risk: which may occur due to the fact that the fund might have exposure through contract with third parties;
- liquidity risk: which may occur due to the fact that the level of investments is made in financial instruments that could have a low level of liquidity in some extraordinary circumstances for example in the case of market crash and default of debt claims on issuers side.
